

# stellar X<sup>2</sup>

PREMIUM QUALITY WITH  
UNRIVALED SOUND

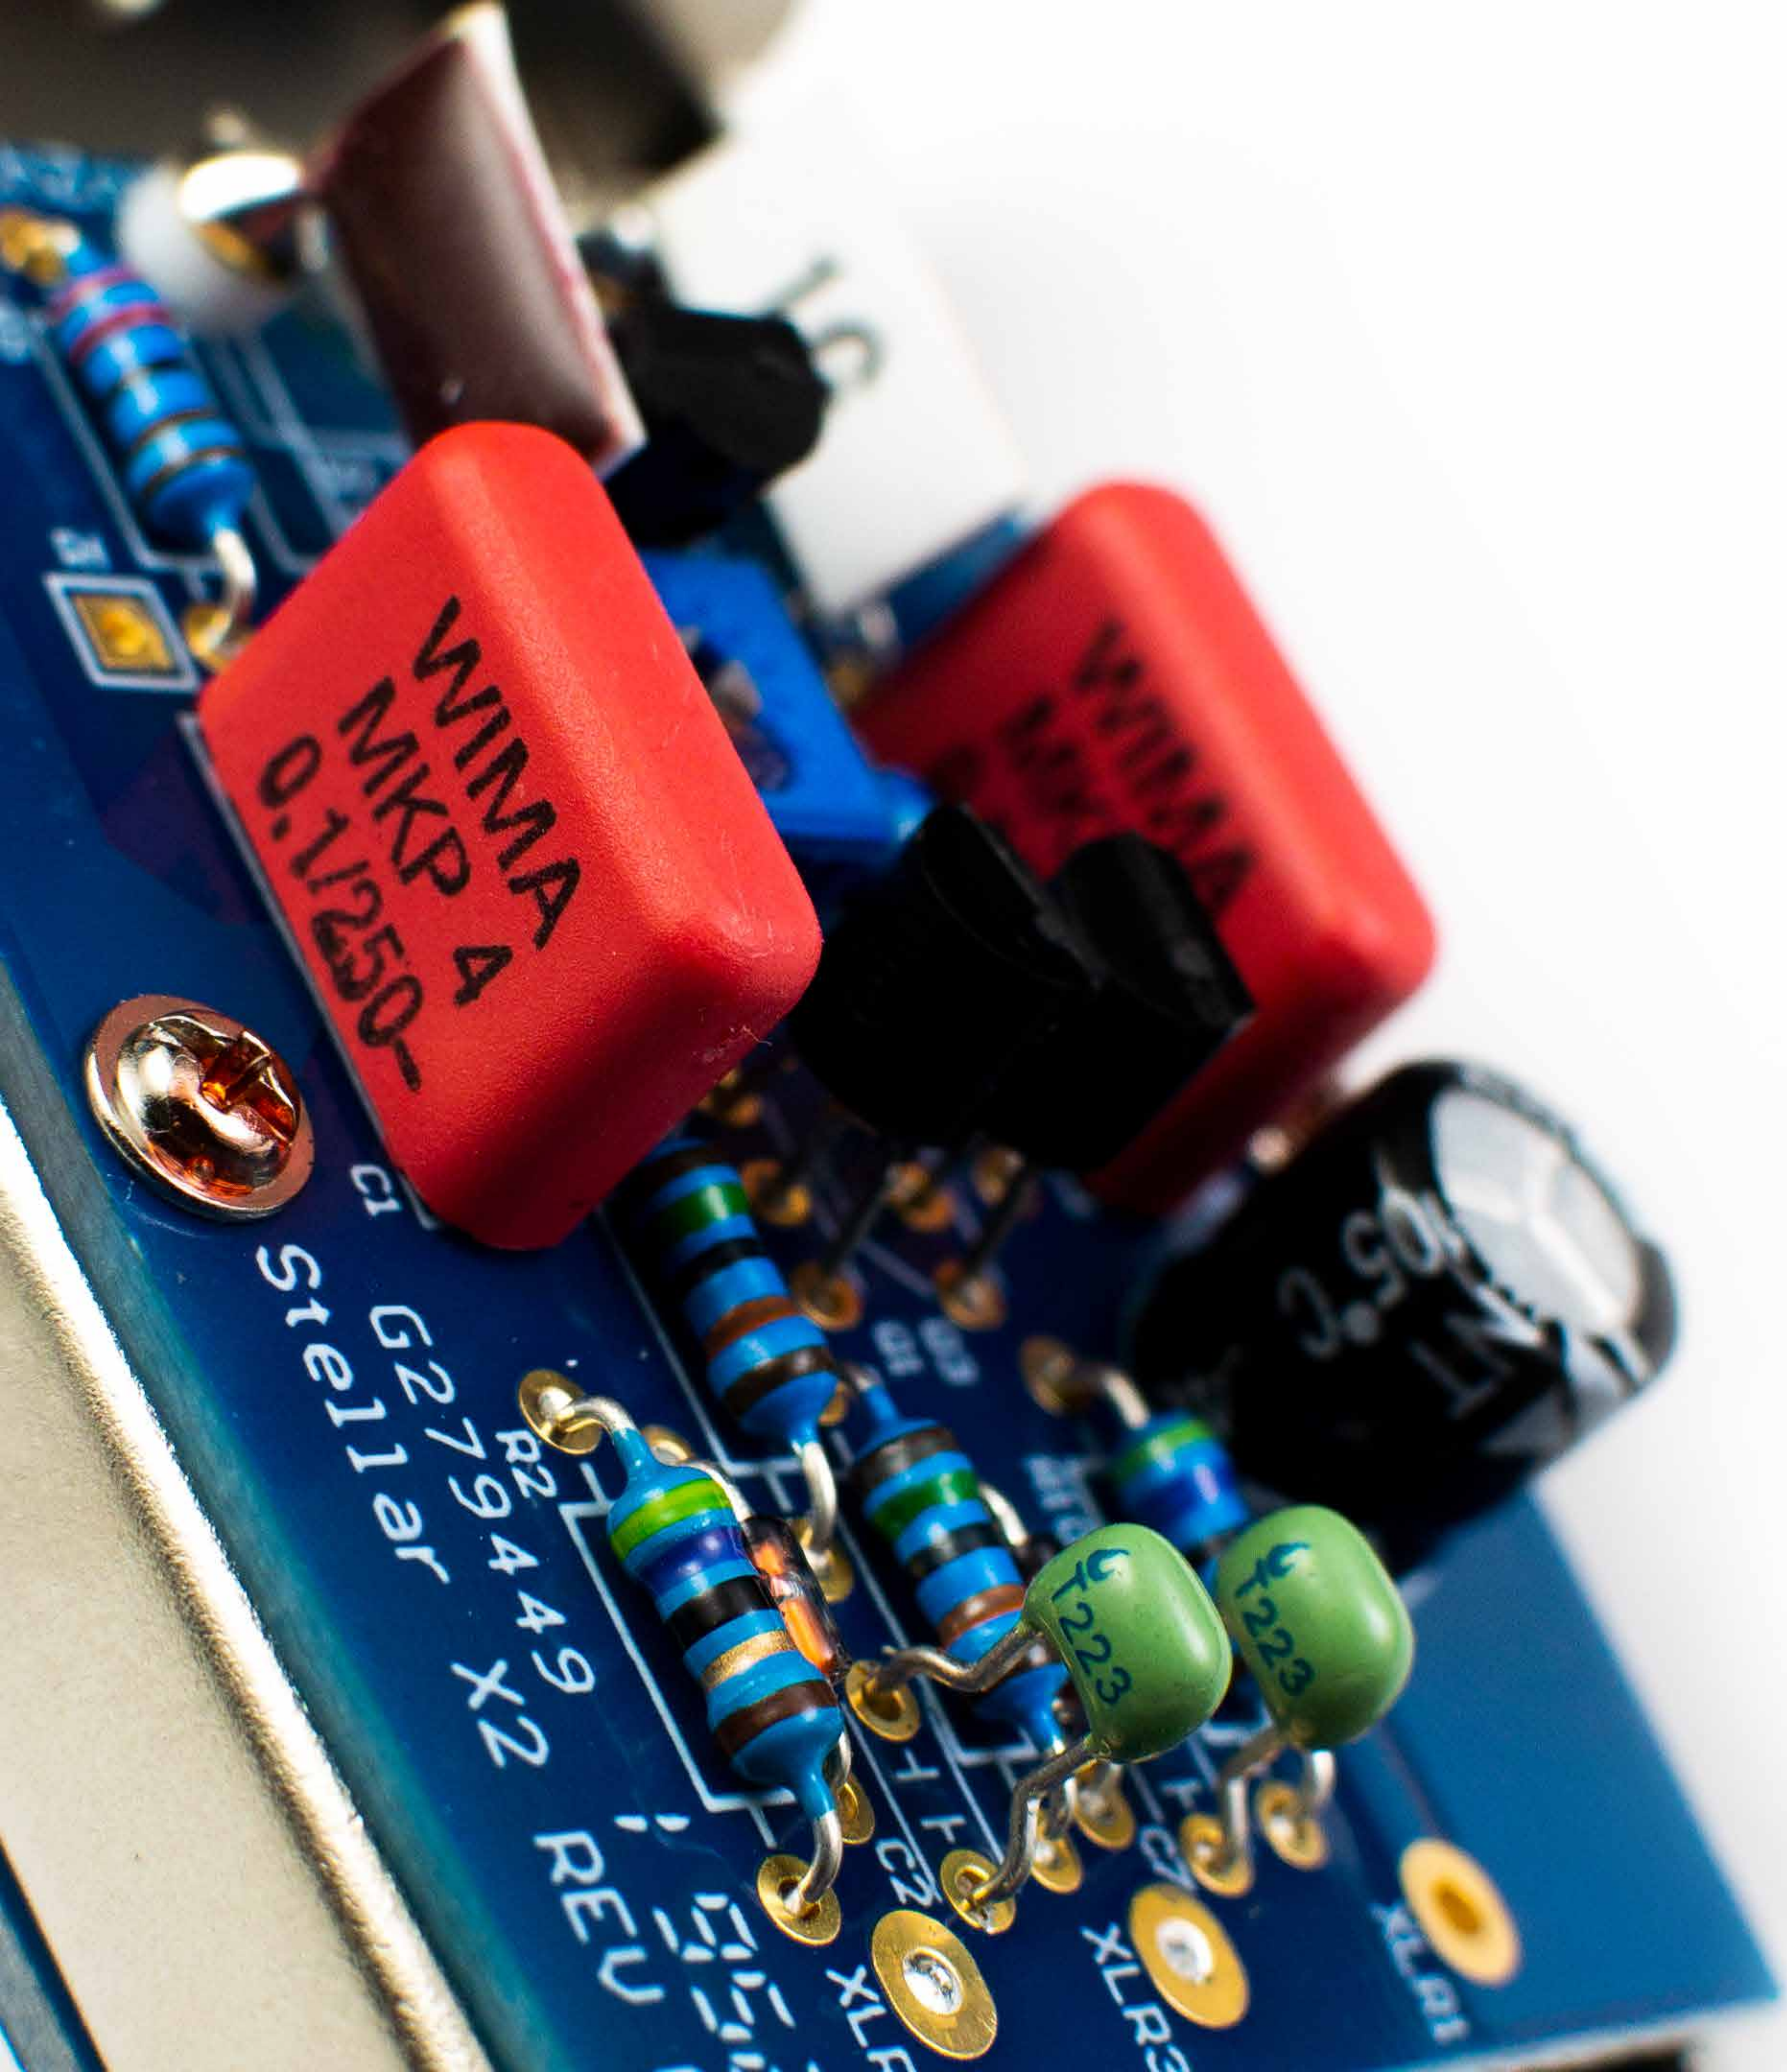

# K67 Style Capsule

## Carefully Tuned Sound

Utilizes a '67 Style Capsule. Made to perfection to ensure the most neutral and clear sound.

Our capsules are made with pure brass and use Japanese imported mylar. They are manufactured with high precision machinery to achieve high sensitivity. This makes them able to reproduce even the most subtle sounds.

## Highly Optimized Circuit

Meticulously Selected Components

Our custom transformerless JFET circuit provides excellent performance with low noise ( $< 13\text{dBa}$ ) and low distortion. High frequency attenuation is added to remove any harshness commonly associated with the K67 style capsule. Our circuit is made using German WIMA film capacitors and high quality components with tolerances as high as 1%. In addition, our PCB uses gold traces for higher conductivity.

## **High Quality Construction**

### Smooth Matte Black Finish

The Stellar X2's body and frame are made from high-grade steel. This gives it added durability and strength. All body parts of the Stellar X2 are evenly powder coated and heat-treated to ensure a smooth and scratch resistant surface.

# Professional Reviews

## What the Pros are Saying

“On vocals the mic delivers a clean representation of the person in front of it, with **no obvious coloration and a good balance of low-end density and high-end detail**, all the while sounding **smooth rather than aggressive**. The lack of significant presence peaks also means the mic should suit a wide variety of voice types.”
